

Clearing Biohazard Waste

Those on duty:

1. Clear Small bins on tables and bins in hood. If bags are wet and broken, please replace.
2. Clear waste from bin near sink into large bin near bacterial hood
3. Double bagging is required IF bags are broken/leaking
4. When bags are 70-80% full, tape the mouth shut and place in large biohazard disposal bin
5. Wash up and reward yourself! =)

Not on duty:

1. Clear Small bins if overflowing
2. Clear bins in hoods immediately after use
3. Decontaminate liquid biological waste using Presept tablets
4. We have no cytotoxic waste. If Cytotoxic waste is created, please contact Yi Han or Ivesc with explanation
5. If biological spills occur, refer to SOPs on biological waste management and use the biological spill kit under the sink. Please contact the relevant authorities (on main door)
6. Thank you for helping to keep the lab safe for all!
